50 College Street, South Hadley, Massachusetts 01075, United States

EDUCATION

Bachelor of Arts in Computer Science and Mathematics

Mount Holyoke College

Completed degree requirements in Data Science and Statistics

August 2023 - May 2027

CGPA: 3.95/4.00

WORK EXPERIENCE

Information Technology(IT) Supervisor

Mount Holyoke Information Technology Help Desk

Sept 2024 - Present

- Provide technical support to 40,000+ non-technical members through remote, walk-in, and ticket management systems (TeamDynamix), handling, prioritizing, and troubleshooting 50+ ad hoc requests per week.
- Worked on a customer support analytics project using SQL, Python, and Power BI to identify recurring incidents, escalation patterns, and data quality issues, then delivered recommendations for service improvement.
- Support and administer users with Google Workspace, Microsoft 365, Learning Management Systems (Moodle, Canvas, Google Classroom), Workday, and other applications on personal and college-owned devices.
- Onboard students, staff, and faculty with account and mailbox setup, multi-factor authentication (MFA), and password resets.
- Supervise and train 50+ IT assistants and new hires in delivering Tier 1 technical support and related user services.
- Utilize generative AI tools to create 30+ knowledge-based articles and documentation, and standardize 100+ support response templates, streamlining IT support workflows.

Machine Learning Intern

National Institute for Theory and Mathematics in Biology (NITMB)

June 2025 - Aug 2025

- Built a generative machine learning pipeline in Python (PyTorch, Pandas, NumPy, scikit-learn) for large-scale data processing and modeling biological behavior from 100,000+ data points, achieving 96% accuracy on tests.
- Used SQL, GitHub, Linux, and MLflow (MLOps) for reproducible workflows, and tracking 50+ experiments.

Data Science and Bioinformatics Trainee

University at Albany RNA Institute

June 2026 - Aug 2026

- Built automated ETL and data integration pipelines in Python and R to extract, clean, and transform biological datasets on Linux/HPC systems; used Git for version control and PostgreSQL for data storage and analysis.

Academic Mentor, Teaching Assistant & Career Advisor

Mount Holyoke College

January 2024 - Present

- Mentored 200+ students in Computing Systems & Architecture, Operating Systems, and Data Visualization.
- Lead career-development sessions for 50+ sophomores on resumes, networking, professional communication, and career paths.

PROJECT

Customer Support Resolution Analytics

May 2026 - Present

Python, Pandas, NumPy, Excel, scikit-learn, Git, SQL (PostgreSQL), Power BI (DAX), Matplotlib, Seaborn

- Building a customer support predictive model using 25,000+ support tickets to predict whether a customer will contact again within 7 days, achieving 0.84 AUC and flagging high-risk tickets.
- Analyzed resolution time, transfers, escalations, and support costs using SQL and Power BI to build dashboards tracking key metrics and trends, validating data accuracy and integrity, and delivering actionable insights.

Robotic Equipment Performance Prediction

May 2024 - Present

Python, TensorFlow, PyTorch, Pandas, SQL (PostgreSQL), FastAPI (REST API), Docker, Git, Power BI (DAX)

- Built a machine learning pipeline on 355,000 robot sensor time-series samples to predict equipment performance, automating data extraction, transformation, and feature engineering; achieved $R^2=0.91$ on held-out data.
- Deployed the trained machine learning model as a Dockerized API service, storing 500+ time series forecasting and prediction results using SQL for analysis and Power BI reporting.
